# Chapter 6

Handbook of Learning Analytics

First Edition

## Going Beyond Better Data Prediction to Create Explanatory Models of Educational Data

Ran Liu & Kenneth R. Koedinger

# Cross Validation

# Cross Validation

- Estimate how accurately a predictive model will perform in practice
- Give an insight on how the model will generalize to an independent dataset

# Hold-out Validation

**Problem:** very dependent on which data are in each group

# K-Fold Cross Validation

Sample			M1 Error	M2 Error
Test 1		Training 1	5	2
Test 2		Training 2	4	2
			3	1
			5	4
			4	2
			<hr/>	<hr/>
			4.2	2.2

Calculate how accurate we are in each “fold”  
and average the answer

# Activity

*Which make better pets? Dogs or cats?*

Model	Prediction	Sample Error	Wild Sample
Random	dogs		
Majority Class	dogs		
Hold out Majority Class	cats	100%	
X-validated Majority Class	dogs, cats, cats, dogs, cats	1, 0, 1, 0, 1, 1	

# RPART

2	0.012	1		0.948	0.992	0.036941
